

Abstract

The invention relates to a closure cap for a container (50) having a container aperture by means of which a container aperture (54) of a container (50) can be released so that medium can be discharged from the container (50), and be closed so that a discharge of medium is substantially prevented, a container for receiving a medium provided with a container aperture (54) and a closure cap (1) by means of which said container aperture (54) can be closed and opened for discharging medium through said aperture (54), and a method of manufacturing an integral closure cap (1).
